Introduction

PANAM[®] has emerged as renowned name in Global market for 'Instrumentation Fittings & Valves'. Since its inception in 1998 to present day, **PANAM**[®] has added new product every year and has broadened its product portfolio and its clientele base by supplying to potential customers worldwide. Key core values like Timely Delivery, Quality Consistency, Product Improvisation and after sales service has been instrumental in the phase wise evolution of company. Continuous improvement is the key to success, Customer feedback are taken with positive attitude and product are constantly groomed to a new quality and performance level to cope up with the competition. Our products are known for providing high-quality, high-reliability, low-cost options for the oil and gas industry. Over the year, the company has evolved from a product based company to a complete system solution provider. Over the coming years the entity of the company will attain state of the art operational efficiency for maintaining a competitive edge, with the advent increase in the utilization of its products in oil, gas and power sector.

PANAM[®] is having state of the art manufacturing facility span over an area of 65,000 sqft with a fleet of CNC machines, VMC machines, Semi-Automatic Lathe machines, High pressure test bench with SCADA control, Configuration centre for transmitters and dedicated R&D Team.

PANAM[®] is manufacturing a wide range of Tube Fittings and Instrumentation products in different sizes and materials like Stainless Steel & Other Alloys (e.g. Monel, Hastalloy, Duplex, Super Duplex etc. as per the customer's requirements).

PANAM[®] offers its products in various end connections like NPT, BSPP, BSPT, ISO Tapered, ISO Parallel, Tube & Pipe Socket Welded Ends, etc.

PANAM[®] meets and even exceeds the requirements of ASME and MSS Series Standards. All materials are supplied in compliance with ASTM Specifications and verified by NABL approved third party laboratories.

PANAM[®] Tube Fittings are 100% factory tested and are in compliance with NACE MR0175 & NACE MR0103 with Heat Code Traceability. Working pressure upto 6,000 psig (413 bar) and also available in higher ratings on request.

Features

- Easy to install.
- Sizes range available from 1/16" to 2" and 2 mm to 50 mm. Diverse materials and configurations are available.
- Female nut threads are silver-plated to reduce the friction against the body threads & to prevent galling.
- Fittings are easy to disassemble & re-assemble.
- Precisely machined components ensure perfect deformation of the ferrules and tubing.
- Every fitting is stamped with size, material, and heat code.

Function

The **PANAM**® tube fitting is a mechanism used both to seal and to grip tubing. The geometry **PANAM**® fitting produces a leak-tight assembly.

To assemble, simply insert the tube into the complete assembly until the tube bottoms-out against the shoulder of the **PANAM**® fitting body. The two ferrules are driven forward between the nut and fitting body using the mechanical force created by rotating the nut clockwise using wrench. Compression nut threads are silver plated which prevents galling. The back ferrule is driven against the tapered rear of the front ferrule and the front ferrule is driven by force into the tapered mouth of the body. The rear ferrule is swaged radially inwards on the tube while lifting the front ferrule out to form a full-faced seal on the tapered surface of the body. Back ferrule locks together the fitting and tube forms a primary seal which absorbs the pressure pulses & vibration. Front ferrule forms a secondary seal which achieves the connection tube and fitting and guarantee a bubble tight Zero Leak Sealing.

The 1-1/4 turn of the nut from the hand tight position assures consistent drive of the sealing members. It ensures an effective seal against high pressure as well as ultra high vacuum conditions

Rugged body construction, High precision machined surface finished and standardize tolerances provides maximum trouble free service life in severe working conditions.

Note: The above illustrated sealing action of a **PANAM**® Tube Fitting which takes place when the assembly is fully tightened..

Tube Handling

Careful handling and storage practices will protect tubing from unnecessary scratches, nicks, or degrading the good tubing surface finish.

- Tubing ends should be capped so any foreign materials will not fall inside during transportation and storage.
- Do not drag across tubing rack, cement, gravel or any rough surface.
- Do use correct tube cutter for tube material. The wrong cutter may result in excessive deformation of the tube end.
- Do not cut deep with each turn of cutting.
- Tube cutters and hacksaws should be sharp enough.
- Hacksaw blades should have at least 32 teeth per inch.
- Do deburr tube ends before inserting in fittings.

Identification of **PANAM**® Tube Fittings

The metric size of **PANAM**® Tube Fittings have extra stepped shoulder on the body and nut to distinguish them from the imperial size.

Standards for Raw Materials

PANAM® tube fitting are supplied in various materials to satisfy the needs of various applications including pulp & paper mills, petrochemical, chromatography, on shore & off-shore oil & gas, refinery, analytical instrumentation, steel mill, pharmaceutical, chemical, power generation plants, shipbuilding, and alternative fuels.

Pressure Ratings

PANAM® tube fitting ends are rated to the working pressure of tubing as listed in Tubing Section. Careful selection of high-quality tubing is important when installing safe, leak-tight systems.

Stress values are based on ASME Code for Pressure Piping B31.3, Process Piping, at ambient temperature.

Stress Values as per ASME B31.3					
Material	Allowable Stress Values		Design Factor	Ultimate Tensile Strength	
	psig	bar		psig	bar
SS 316	20000	1378	3.75:1	75000	5170
Brass	10000	689	4:1	40000	2760
Steel	20000	1378	3:1	60000	4140

Elasticity Limit

Operating temperature range of fittings with threaded end connections.

The temperature range of threaded end connections may be limited by the characteristics used for sealing Teflon tape or sealant for tapered threads, as well as the characteristics of the materials of the gaskets for cylindrical threads. The table shows the operating temperature range for gaskets of different materials.

Gasket Type	Material	Temperature Min		Temperature Max	
RS gasket	Nitrile Butadiene Rubber (BunaN)	-25°C	-13°F	110°C	230°F
	Fluorocarbon (FKM)	-15°C	5°F	204°C	400°F

	Stainless Steel	-254°C	-425°F	538°C	1000°F
RG gasket	Polytetrafluoroethylene (PTFE)	-54°C	-65°F	232°C	450°F
	Vulcanized Fiber	-60°C	-76°F	105°C	221°F
O-ring	Nitrile Butadiene Rubber (BunaN)	-30°C	-22°F	110°C	230°F
	Fluorocarbon (FKM)	-20°C	-4°F	204°C	400°F

NPT & ISO / BSP Tapered Threads Ends

Pressure ratings for fittings with both tube fitting and pipe thread ends are determined by the end connection with the lower pressure rating.

NPT or ISO/BSP Tapered Threads Pressure Ratings:

The table lists pressure ratings for male and female tapered pipe thread ends. For female and male pipe threads to have the same pressure rating in the same nominal pipe size, the female thread would require a heavier wall, resulting in a fitting too large and bulky to be practical.

Working pressure is based on Process Piping ANSI/ASME B31.3 at ambient temperature. To determine pressure ratings in accordance with ASME B31.1, Power Piping:

- stainless steel material—multiply by 0.94. • carbon steel material—multiply by 0.85. • Brass material ratings remain the same.
- To determine MPa, multiply bar by 0.10.

* Maximum operating pressure indicated at ambient temperature

working Pressure

- The maximum working pressures of the tube ends at ambient temperature are determined by the maximum working pressure of the **PANAM**® Tubing that is used.
- The maximum working pressures of the thread ends at ambient temperature are as above.
- To get the maximum working pressure at elevated temperature, use the maximum working pressure at ambient temperature to multiply the factors in the form of Elevated Temperature Factors in Tubing Section.
- The maximum working pressure of the whole fitting is determined by the end connection with the lowest pressure rating.

Pipe Thread Sealants

Pipe thread sealant for tapered pipe thread assembly is essential to ensure leak-free thread sealing. Sealant usually contains a lubricant. Thread sealant fills the voids between the threads and prevents thread galling. Wrap PTFE tape clockwise from first thread. Do not overhang the first thread; the tape may get into the fluid system.

Pressure Ratings For Tubes

Fractional Stainless Steel Tubing:

Allowable working pressures are calculated from an S value of 20,000 psi (137.8 MPa) for ASTM A269 tubing at -20 to 100°F (-28 to 37°C), as listed in ASME B31.3 and ASTM A213 tubing at -20 to 100°F (-28 to 37°C), as listed in ASME B31.1, except as noted.

Fully annealed austenitic Type 304 or 316 seamless tubing ASTM A269 or ASTM A213, or equivalent.

Tubing to be free from scratches, draw mark, dirt, dust, flat spots, and suitable for bending and flaring.

Recommended hardness : 80 HRB or less.

Safety factor = 4 considering tensile strength to be 75,000 psi at room temperature.

For Welded Tubing

For welded and drawn tubing, a derating factor must be applied for weld integrity:

- For double-welded tubing, multiply working pressure by 0.85
- For single-welded tubing, multiply working pressure by 0.80.

Pressure Ratings For Tubes

Metric Stainless Steel Tubing:

Allowable working pressures are calculated from an S value of 137.8 MPa (20,000 psi) for EN ISO 1127 tubing (D4, T4 tolerance for 3 to 12 mm; D4, T3 tolerance 14 to 50 mm) at -28 to 37°C (-20 to 100°F), as listed in ASME B31.3 and ASTM A213 tubing at -28 to 37°C (-20 to 100°F), as listed in ASME B31.1, except as noted.

- For double-welded tubing, multiply working pressure by 0.85
- For single-welded tubing, multiply working pressure by 0.80.

Temperature De-Rating Factors

To determine allowable working pressure at elevated temperatures, multiply allowable working pressures from the tubing pressure rating table by a factor shown in the table as below.

Example: Type 316 stainless steel 1/2 in. OD 0.049 in. wall at 1000°F

- The allowable working pressure at –20 to 100°F (–28 to 37°C) is 3700 psig.
- The elevated temperature factor for 1000°F (537°C) is 0.76: 3700 psig 0.76 = 2812 psig
- The allowable working pressure for 316 SS 1/2 in. OD 0.049 in. wall tubing at 1000°F (537°C) is 2812 psig.

Lowering Factors for Elevated Temperatures

Temperature		Tubing Material

400	204	0.50	0.96	0.79	0.96	0.96	0.61	0.82	0.90	0.85	0.74
600	315		0.85	0.79	0.85	0.85	0.45		0.84	0.79	0.67
800	426		0.79	0.75	0.79	0.79			0.81	0.75	
1000	537		0.76		0.76	0.35				0.73	

Dual-certified grades such as 304/304L, 316/316L, and 317/317L meet the requirements for the lower maximum carbon content of the L grades and the higher minimum yield and tensile strength of the non-L grades. Use of 2507 super duplex stainless steel at temperatures above 482°F (250°C) causes micro structural changes that lead to embrittlement and loss of corrosion resistance. Derating factor at 482°F (250°C) is 0.81.

Tube Selection Date

Hardness

- Tubing must be softer than fitting material. The metal tubing must be fully annealed and suitable for bending and flaring. Tubing hardness must be selected according to the information as below.

Surface

- Tubing must have a surface free from scratches, draw mark, dirt, dust and flat spots.

Ovality

- Tubing in oval or out-of-roundness way not fit into the fitting. Do not force the tubing into the fitting; it may damage the fitting sealing system on nut, ferrules, and body.

Wall Thickness

- The pressure rating tables list tubing working pressure ratings in a wide range of wall thickness. A too thin wall may collapse and a too thick wall may not properly be deformed by the ferrule action. Do not use tubing wall thickness not listed in the tables below.

Weld Tubing

- Welded tubing should have a not measurable bead on its outside diameter.

Pre-Swaging

Pre-Swaging **PANAM**® Ferrules onto tubing.

Dimensions rings	in	1/2, 5/8, 3/4, 1, 1-1/4, 1-1/2 and 2.
	mm	12, 14, 15, 16, 18, 20, 22, 25, 28, 30, 32, 38, 42 and 50.

Pre-swaging unit must be used to install 1-1/4, 1-1/2 and 2in. and 28, 32 and 38mm fittings.

Single Ferrule Tube Fittings

PANAM® Single Ferrule Tube Fittings are identical to **PANAM**® Double Ferrule Tube Fittings in pressure and temperature ratings.

Components:

This Fitting includes single ferrule with standard **PANAM**® Fitting Body and Nut. Designed with highest quality standards.

Dimensions:

PANAM® single ferrule tube fittings are dimensionally identical to **PANAM**® double ferrule tube fittings.

Ordering Information:

To order 3/8" OD x 1/4" NPT SS 316 Male Connector with single ferrule, SF should be added at the end of the part number. i.e. PMC-06-4N-SS-SF For more details about part numbers, see ordering information.

Installation

PANAM® Tube Fittings up to 1" or 25 mm

1. Loosen the nut 1/4 turn from finger-tight position.
2. Insert tubing into the tube fitting, make sure that the tubing rests firmly on the shoulder of the port.
3. Finger-tighten the nut.
4. Tighten the nut 1-1/4 turns with wrench while holding the body of the fitting or the valve steady. (Fig.1).
For small-sized fittings (1/16", 1/8" and 3/16", 2 mm, 3 mm and 4 mm), tighten the nut 3/4 turn with wrench (Fig.2).
For sizes over (1" & 25 mm), tighten the nut 1-1/2 turn with hydraulic swaging tool equipment.

Reinstallation (all sizes)

1. Mark the tube at the back of the nut, mark a line along the nut and fitting body flats.
2. Insert tubing with pre-swaged ferrules into the fitting body until the front ferrule seats.
3. Then rotate the nut with a wrench to the previous pulled-up position as indicated by the marks on the tube and the flats.
4. Tighten the nut slightly with wrench

Plugs and Port Connectors

1. Tighten the plug or port connector 1/4 turn from the finger-tight position while holding the body of the fitting steady.
For small-sized fittings (1/16", 1/8" and 3/16", 2 mm, 3 mm and 4 mm), tighten the nut 1/8 turn with wrench.

Reinstallation

Tighten slightly with a wrench from the finger-tight position.

The Installation Instructions of the tube adapter end of Port Connectors are the same as the **PANAM**® Tube Fittings..

Note:

For the fittings which doesn't have pipe threads, the thread type & size designator can be skipped. i.e. for 3/8" OD Union, PU-06-SS-SG-SF can be used for identification. The same can be identified as PU-06-SS-SF if NACE material is not required. The same can be identified as PU-06-SS if double ferrules are required.

Example 1: Tube to Pipe Ends

The part number below shows male connector, stainless steel type 316, Tube OD 1/4" x 1/4" NPT.

P	MC	04	4N	SS
1	2	3	4	5

1. **PANAM®** Tube Fitting designates as "P"
2. Name of Fittings: See fitting type designator
3. Tube OD: see tube OD designator
4. Pipe thread end: see pipe threads designator
5. Material: see fitting material designator

Example 2: Tube to Tube Ends

PANAM® Union tube OD 1/4" material SS316

P	U	04	SS
1	2	3	5

Refer to respective designator and symbol

Example 3: Tees and Crosses

For tees, the run (1+2) shall precede the branch (3). For Crosses, the run (1 to 2) shall precede the branch (3 to 4).

* The E dimension is the minimum nominal opening. This fittings may have a larger opening at the pipe / straight thread end. All dimensions are in millimeters unless otherwise specified. Dimensions are for reference only, subject to change.

Application

- Connecting insert for connecting two **PANAM**® tube fittings one size to another at a minimum distance from one another without using tube section.

Mounting the Connection Insert

- The side of the connecting insert that simulates the ferrules is mounted first. Unscrew the nut of the pipe fitting and remove the ferrules. Set insert with put the nut on it, simulating ferrules in the fitting body and tighten the nut manually. While holding the fitting body stationary, tighten the nut with a wrench 1/4 turn to fittings with a diameter of 6 mm (1/4 ") or more or 1/8 turn for fittings of 4 mm (1/8") or less.
- The tube fitting is mounted on the other side of the connection insert (with a notch) similar to installing a fitting on a tube. Insert the notched end into the tube connect it all the way into the fitting body and tighten the fitting nut by hand. Then holding fixed fitting body, tighten the nut with a wrench one turn and a quarter for the fittings diameter from 6mm (1/4 ") or more or 3/4 turn for fittings with a diameter of 4mm (1/8") or less.
- Subsequent, if necessary, disassembly / assembly of the fitting is carried out in accordance with this procedure for tube pipe fittings.

Application

- Connecting insert adapter is designed to connect two **PANAM**® tube fittings of different diameters between each other at a minimum distance from one another.

Mounting the adapter insert

- The side of the connecting insert, simulating the ferrules, is mounted first. Unscrew the nut of the pipe fitting and remove the ferrules. Set insert an adapter with a nut worn on it, simulating ferrules in the fitting body and tighten the nut by hand. While holding the fitting body stationary, tighten the nut with a wrench 1/4 turn for fittings with a diameter of 6mm (1/4 ") or more or 1/8 turn for fittings from 4mm (1/8 ") or less.
- Installing a tube fitting on the other side of the adapter insert (with a notch) made in the same way as fitting a pipe. You must insert the notched end into tube the connector all the way into the fitting body and tighten the fitting nut by hand. Then, holding the fitting body stationary, tighten the nut with a wrench one turn and a quarter to fittings with a diameter of 6 mm (1/4 ") or more or 3/4 turn for fittings with a diameter of 4mm (1/8 ") or less.
- Subsequent, if necessary, disassembly / assembly of the fitting is carried out in accordance with this procedure for crimp pipe fittings.

Kits and Sets of Front & Back Ferrule and Nuts

All front & back ferrule of **PANAM**[®] can be purchased separately and in a set, including complete with a nut. Packing ferrules in sets simplifies their storage and installation, and also protects against damage during transportation.

The following sets of ferrule and nuts are available for order:

PFS Ferrule Set

The kit consists of one front and one back ferrule of **PANAM**[®]. To order, you must also specify outer diameter of the tube in accordance with the configuration table. For example, a set of ferrules for the tube with an outer diameter of 1/4 inch it will be **PFS-04**, and for a tube with an outer diameter of 6mm will be **PFS-M06**.

Set of Ferrule and Nuts PNFS

The kit consists of one front and one back ferrule of **PANAM**[®]. To order it is necessary also indicate the outer diameter of the tube in accordance with the configuration table. For example, a set of ferrules for the tube with an outer diameter of 3/8 inch will be **PNFS-06**, and for a tube with an outer 8mm diameter will be **PNFS-M08**.

Set of 10 Sets of Ferrules PFS-SET

The set consists of 10 front and 10 back ferrules of **PANAM**[®]. To order, you must also specify outer diameter of the tube in accordance with the configuration table. For example, a set of 10 sets ferrules for a tube with an outer diameter of 1/2 inch will be **PFS-08-SET**, and for a tube with an outer 12mm diameter will be **PFS-M12-SET**.

Set of 5 sets of Ferrules with PNFS-SET Nut

The set consists of 5 front, 5 back ferrules and 5 nuts **PANAM**[®]. To order, you must specify also the outer diameter of the tube in accordance with the configuration table. For example, a set of 5 sets ferrules and nuts for a tube with an outer diameter of 3/4 inch will be **PNFS-12-SET**, and for a tube with outer diameter 14mm will be **PNFS-M14-SET**.

Dielectric Fittings

Dielectric fittings are designed to isolate instruments and measuring equipment from the effects of electric currents, voltage and static discharges.

Features:

- Material - 316 SS stainless steel for use in aggressive environments.
- Polyamideimide insulation with high electrical, chemical, UV resistance and low water absorption maintains dielectric strength and integrity when operating in a wide climatic range.
- Pipe crimp or conical threaded fittings ends provide a direct connection with technological pipelines.
- All **PANAM**® dielectric fittings provide maximum flow throughout.

Gaskets for Parallel Threads

The sealing of cylindrical threads in accordance with DIN-ISO 228/1 is carried out directly by metal. Metal as a result of compression of the sealing surfaces on the outside of the thread or due to the use of special sealing gasket.

Seals for External Parallel Thread G (RS)

PANAM® PRS gaskets provide outer seal parallel thread ISO. The gasket consists of an inner ring made of FKM material or Buna-N attached to an outer ring made of stainless or carbon steel.

PRS Gaskets for External Metric Threads

In appearance and design, **PANAM**® PRS gaskets for outdoor metric threads are similar to gaskets for ISO external cylindrical threads. Designations and dimensions of PRS gaskets for external metric threads are given in the table.

Ordering Information:

To order sealing gaskets for threads M8x1.0 must be added at the end of the code products from the table code for inner ring material:

F - for FKM (standard)

B - for Buna-N (on request)

Gaskets For Parallel Threads

Seals For External Parallel Thread RP

PANAM® PRP Metal seals provide ISO parallel thread seals according to DIN 3852 FORM B.

Gaskets are made of copper. PRP gaskets can also be used in conjunction with fittings with parallel ISO threads in accordance with DIN 3852 FORM A.

The use of PRS gaskets in conjunction with ISO parallel threaded fittings, made in accordance with DIN 3852 FORM B (RP - thread) is not allowed.

Gaskets For Parallel Threads

Seals For Internal Parallel G-Thread (RG)

PANAM® PRG Metal seals provide ISO parallel internal thread seals according to DIN 3852 FORM Y.

Sealing is carried out by means of the pressure of the end surface of the external thread on the sealing a ring located on the flat bottom of the internal thread.

Gaskets are made of copper. Other gaskets available (SS 316, PTFE).

To order a gasket made of another material, it is necessary to replace the letter in the product code material code copper (CU) to another possible of the following:

S - For stainless steel gasket SS 316

T - For Teflon gaskets (PTFE) *

The operating temperature range for gaskets made of various materials is specified in the table on page 2 of the catalog.

* Dimensions of PTFE gaskets as well as gaskets for measuring instruments (pressure gauges, etc.) may differ from the sizes indicated in the table. Specify the necessary sizes when ordering.
